

Racket Search

Happy Paths

- test, then the (single-word searches)
- strawberry — matched strawberries too?
- multi-word searches
 - noticed words searched independently
 - "sliced bread"?
- emoji searches
- Words matched in: title, transcript
- ...can you search for 'a'?

Negative Testing

- what happens if 0 results (looks roughly fine)
- (Stripping of certain characters e.g. dots?)

Later questions

- AMA filter on search results?
- Order of results? (most recent first?) — ...does it favour matches in title?

Possible specification?

- Maximum 1000 rackets in results
- First 10 rackets shown, with "see more"
- First 5 volleys shown, with "see more"
- First 8 tags shown(?!), and no "see more"
- First 3 racketeers shown, with "see more"
- Fuzzy match: any 1 character different (or missing)?
- Multiple words are searched independently

Limitations

- Can't verify search results against database

Possible issues

- Search results headers in different order to page body
- "No tags found" - Tags is lowercase
- /posts/, /prompt/ and /users/ in URL
- I feel like "sliced bread" should work as a quote search. It doesn't.
- Need timestamps? (don't know when things were posted)
- Search for 🤔 didn't find it in transcript?

- Does it not search manually edited transcripts? (or is it an indexing delay?)
